

# Curtain Repair and Cleaning

Center-Line employees have tested many of the cleaning products available on the market. Soaps in both liquid and powder forms, and combinations of the two have been experimented with.

To date, we have found the best products to be available from:

Craft Laboratories  
P.O. Box 11226  
Fort Wayne, Indiana 46856  
(800) 252-7238

The products recommended are:

1. 501
2. Roadmaster

## Application of Cleanser

### **First:**

Mix products 501 and Roadmaster 50/50 straight (no water added) in pressure canister with spray nozzle attachment

### **Second:**

Work your way down the curtain five feet at a time. Spray mixture onto curtain from top to bottom and scrub with long handled stiff bristle brush

### **Third:**

Before the mixture dries, rinse five foot sections with water. Move to the next section to be cleaned and repeat the process. CAUTION Care should be taken when cleaning areas where graphics have been applied. Do not scrub using heavy or hard strokes. Graphics have been applied over the acrylic top coat and can be damaged if care is not taken. Use gentle strokes and rinse immediately.

### **Fourth:**

For first time cleanings or if results are not acceptable, an intermediate step can be taken. Try this method;

1. 501 & Roadmaster 50/50 mixture
2. Scrub
3. Roadmaster 50/50 with water
4. Scrub
5. Rinse with water

### **Note:**

It is extremely important you not attempt to clean sections larger than recommended and the cleaners be rinsed with water before drying on curtain surface. Use caution when using this or other cleaning compounds. Refer to manufacturer warnings and instructions before use.
